

Title: Flipped Classroom in PE through SLS

Since 2018, we have adopted “Flipped Classroom” as our main approach to teach some of the “theoretical” kind of content prior to the actual PE lessons. With Home Based Learning enforced during the period of circuit breaker this year, the team took the opportunity to further explore how learning can be facilitated and enhanced with the aid of technology beyond videos and quizzes. Using Student Learning Space (SLS) as the primary learning platform, the team discovered many interesting ways to tap on the features available to better support teaching and learning. The first part of the presentation brings you through our journey of trying to empower our learners to take charge of their own health and fitness. The second part will demonstrate how we creatively used mobile games as a way to help students gain visual understanding of space and games concepts.
